- Mobile Scissor and Mast lifts
- Stock Pickers
- Rack & Pinion Mast Passenger lifts and Platforms
- Truck Mounted Knuckle boom and stick boom cranes
• Hook Loaders and Utility Cranes
• Special Purpose Machines
Our Product and Application Knowledge, our experience, our commitment to deliver customer satisfaction have made us the First Choice of our Customers.

Aluminium Scaffolds (Mobile Access Platforms): Mtanit with its brand "Aardwolf Quickfit" is world’s leading provider of Aluminium Access Tower System. Our product and system are premium quality and are designed to meet highest national and international standards including EN 1004. Our ISO 9001 quality accreditation means that we supply quality products, delivered on time and to specification. Our product range include the standard narrow, wide and extra wide models with accessories for Cantilever and Bridge Platforms and Custom built solutions for Boiler Maintenance, Aviation Docking System, Tank Scaffold and other special application

Industrial, Construction and Commercial Equipment & Supplies: Way back in 1974, Mtanit was founded with this business unit. Today this business unit is organised itself into three product divisions.

Material Handling: Over head Cranes and Slings, Floor Cranes, Lifting Tackles, Chains, Ropes, Slings, Hoists, Shackles, Trolleys, order Pickers and ladders, lashings and web slings.

Training & Certification: To ensure that our customers are safe while performing their task. This business unit have designed dedicated activity wise safety training modules. The training modules not only teaches safe and best work practices but also focuses on products and provides skill and knowledge to get the best out of your tool. Each training module covers the applicable standards and compliance’s, provides knowledge of safe use, maintenance and storage of tools and PPE used. It also focuses on record keeping and documentation to ensure traceability. The "Competent Authority"

The market expects to grow exponentially in the coming years as there are many projects lined up at the award stage. Also, increase in safety demands and limited availability of skilled labour gives spurt to the powered access platforms and other aerial work platforms.

As one of the established players in the AWP market in the country, what is your forecast of the demand for aerial working platforms over the next 2-3 years?
The market expects to grow exponentially in the coming years as there are many projects lined up at the award stage. Also, increase in safety demands and limited availability of skilled labour gives spurt to the powered access platforms and other aerial work platforms. Compared to the USA, Europe and other developed countries like Japan and Singapore, the Indian AWP market is still in the process of maturing in terms of knowledge, use, and the importance of the equipments. In India there is wide man: machine ratio disparity as compared to the USA and Europe.

What will be the demand drivers for your products?
We believe major drivers for AWP market growth in India will be due to exponential growth in the infrastructure segment and increase in demand for safe working practices. We expect to take the AWP market to new heights.

Are there any plans to enter into newer verticals? If so, would you throw light on the same?
We want to complete the full cycle which involves manufacturing, trading and service. We are also in the process of setting up factories to manufacture aerial work platforms in India with leading international tie-ups which will eventually bring latest technologies to India. We are looking for strategic and technological partners for all the divisions and activities which will enhance our efficiency and profitability.

What do you think are the primary concerns of the AWP industry that need to be addressed?
India is a labour intensive market. Though labour is available at very affordable rates no proper guidelines for workman safety are in place. Besides, there are various kinds of regulatory issues in different states. Also, availability of trained manpower who qualifies for work at heights is very less and the implementation of safety norms is still not upgraded from the government side. Lack of proper safety regulations makes them unsafe to use at workspace. Those are our primary concerns.
